

SiteExport Export Failures

See results below, please.

Page Export Problems: According to SiteExport trials there are 27 pages in the User Manual which do not export. The problems have not been determined yet nor have these pages been fixed. It is mostly likely a problem with size of image files.

- [GPS Setup & Status](#)
- [Vector Display Tab](#)
- [TOOLBAR Buttons](#)
- [Route & Mark Manager](#)
- [Create Route](#)
- [Tides and Currents](#)
- [AIS](#)
- [SART](#)
- [The Connections](#)
- [Grib Weather](#)
- [Weatherfax](#)
- [Weather Routing](#)
- [Climatology](#)
- [AISradar View](#)
- [NV Charts](#)
- [BSB4 Charts](#)
- [Vfkaps Charts](#)
- [Object Search](#)
- [Launcher](#)
- [Tactics](#)
- [Watchdog](#)
- [dr_dead_reckoning](#)
- [SAR \(Search and Rescue\)](#)
- [Ocpn_Draw 1.4](#)
- [Portable OpenCPN V2](#)
- [BR24 Radar](#)
- [Celestial Navigation](#)

By the time we were finish trng to export the Offline TOC with Export “Linked Pages” and “All parameters do” checked, we had to Exclude 52 pages total including all of the [Toolbar_Button pages](#) (about 25 pages) and a number of others, which are now contained in the “Manual-TOC-Offline-Single-Pages directory.

When exporting Single Pages

In order to create single page exports, it is highly likely that you must remove most of the “Excludes”

from Admin > Configuration > SiteExport > Excludes (such as this)Keep this List of Excludes for later!

```
options_setting:ships display gps_setup_and_status vector_display_tab
gallery_boats opencpn:toc opencpn:user_corner opencpn:supplementary_hardware
opencpn:supplementary_software opencpn:developer_manual editors
toolbar_buttons toolbar_buttons:tides_and_currents
toolbar_buttons:route_mark_manager toolbar_buttons:create_route
opencpn_user_manual:toolbar_buttons:ais ais:sart plugins:weather:weatherfax
radar_overlay_ais:ais_radar_display charts:nv_charts weather:weather_routing
weather:climatology utility_plugins:object_search charts:bsb4_charts
utility_plugins:launcher sailing_tools:tactics safety:watchdog
navigation:dr_dead_reckoning plugins:safety:sar safety:odrawl1.4_pi
advanced_features:portable_opencpn_v2 radar_overlay_ais:br24_radar
navigation:celestial_navigation included_plugins:grib_weather charts:vfkaps
options_setting:connections gps_setup_and_statusvector_display_tab .pdf zip 7z
edit_user_manual blank blank.txt cruisersforum github
```

Leaving this in the Excludes field:

```
.pdf zip 7z edit_user_manual blank blank.txt cruisersforum github
```

Because if they are “Excluded” you will not get a page!

Additionally “single page” works properly, and puts the images under “opencpn/manual/ etc” in the actual pages namespace and sets all the image links properly.

“all sub namespaces” seems to be less successful at doing just the namespace and all below.

How do we test these pages for export with SiteExport?

If you are an Editor, try to export a single page.

1. Navigate to the page using the links above.
2. Select the “Export Page (siteexport).”
3. Siteexport will show a form with
 - Set Namespace & Parent Namespace all entered properly referring to the namespace you came from.
 - Set Namespace= Correctly entered by selecting the page first.
 - Parent Namespace to Export= Correctly entered by selecting the page first.
 - Export Type= This page only
 - Export linked pages -Enable

- Export all parameters “do” -Enable
- Render Engine: ccredit
- Template: dokuwiki
- Everything else is unchecked.
- Just hit “Start” (without first hitting one of the three “Direct”, “Wget” or “Curl”)
- When clicking the start button it should show you that it will export x/y pages.
- Similar to: Adding “opencpn:opencpn_user_manual:advanced_features:maximise_screen_display” (27 / 379)
- It will pop up and prompt for download.

All 52 pages processed successfully as a single page, most of them within 1:30 minutes but one or two may have taken 2:30 minutes. All of these pages required NO CHANGES and were completed on the first try.

Why are they failing when we try to process a full document? Something is not set up correctly. A timing setting is switched or not operating I think. I have some confusion about all the Timing setting and what they apply too. I think the plugin may have similar confusion.
